

Requirement Engineering → Noun Hunting

Customer reaches at shopping center for shopping, place an order, requests for the required products from the clerk. Clerk checks the required products from the product inventory, verified the product quantity. Customer ends shopping. Order admin verifies the order. If order verified, then generate invoice. Customer makes payments. Customer receives receipt from the Order admin. Order admin requests the Inventory Admin for an update request in Inventory. Inventory admin updates the Inventory and populates the updated Inventory information for the clerk.
